## DESIGN

CINEAK acoustic design panels are available with a collection of quality fabrics, or with your personal digital artwork. Decorating your home cinema while improving the sound quality has become easy! Combine different colors and fabrics to create unique environments. We recommend using our panels on the side walls as well as the back walls. To create a real home cinema environment, place panels against all walls, and play with colour to design a theatrical room. CINEAK will work together with its network of dealers to offer you sample designs of how your home cinema could look like. We will build you a sample sketch using our panels, with your selection of fabrics, and within your budget.

## PURPOSE

CINEAK acoustic design panels are decorative boards which work acoustically by absorbing both low and high frequencies. Using our panels will improve the quality of your entertainment and living room. They offer an attractive solution to improve tonal balance, movie dialog intelligibility, and to minimize sound reflections.

In many home cinemas today we see bad or no acoustical treatment. It is generally known that the best way to improve the sound quality in a room is through placing acoustical elements. No matter how good your speakers are, when the room does not allow good sound, they will never perform as they could. With CINEAK acoustic design panels you will be able to create a better sounding room, while simultaneously decorating the surrounding.

## SIZES

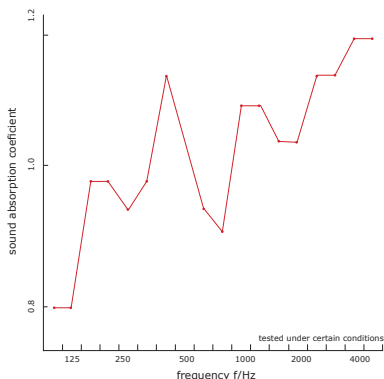

CINEAK acoustic design panels are available in any size, up to 120cm by 240cm. We have panels of 25mm and 50mm thick. Ask your dealer for advice on where to place the different types of panels.

## INSTALLATION

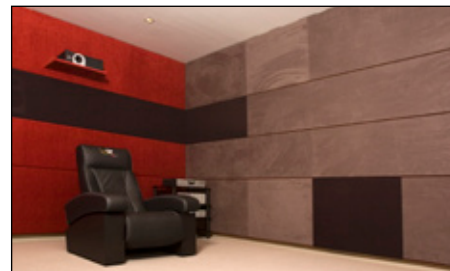

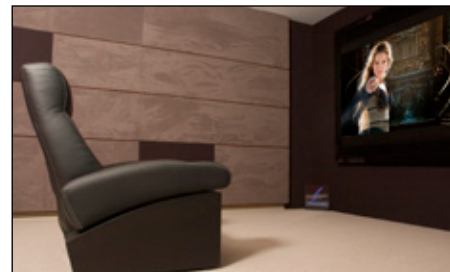

Installing these boards is easier than hanging up a speaker! With the use of our wall brackets, you can place the acoustic design panels against any wall in a matter of seconds. Wrong place, no problem, you can remove the panel and hang it up again as many times as you like.

wall bracket

CINEAK acoustic design panels are high quality, with a noise reduction coefficient (NRC) between 0.8 (below 124 f/Hz) and 1.0 (above f/Hz), hence achieving its acoustic insulation effectiveness, while simultaneously decorating a room.

## FABRICS

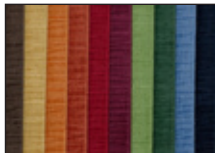

CINEAK acoustic design panels are unique! Covering the acoustic boards with designer textiles makes them decorative acoustic elements. Using them will turn any room into a beautiful space for the eye and the ears.

Our two fabric levels are made up of luxurious high quality textiles from Fabio Trinelli, and Microweb. Some of our fabrics are suitable for public places, as they qualify the fire retardant tests, while the other are suitable for home use. The collection offers many colours and textures, which can be combined to create luxurious wall coverings.

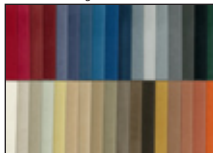

Next to our standard fabric collection, we also offer designer fabrics from Kvadrat, Alcantara, Dedar, Sahco, Rubelli, ... On the right you can see some samples.

Contact one of our dealers to see the fabric collection and start decorating your home cinema!

## COMPANY

CINEAK has started its operations with the design and manufacturing of luxurious home theater seats. The Fortuny deluxe chair was our first product, and is until today our top selling chair. As our home theater seating collection expanded, we created CINEAK acoustic design panels. Now you have one company that can help you with acoustical treatment, decoration, and seats for any cinema or listening room.
