

■ Dave Chester of Custom Controls collects the Most Innovative Control Solution Prize for London Townhouse

## MOST INNOVATIVE CONTROL SOLUTION

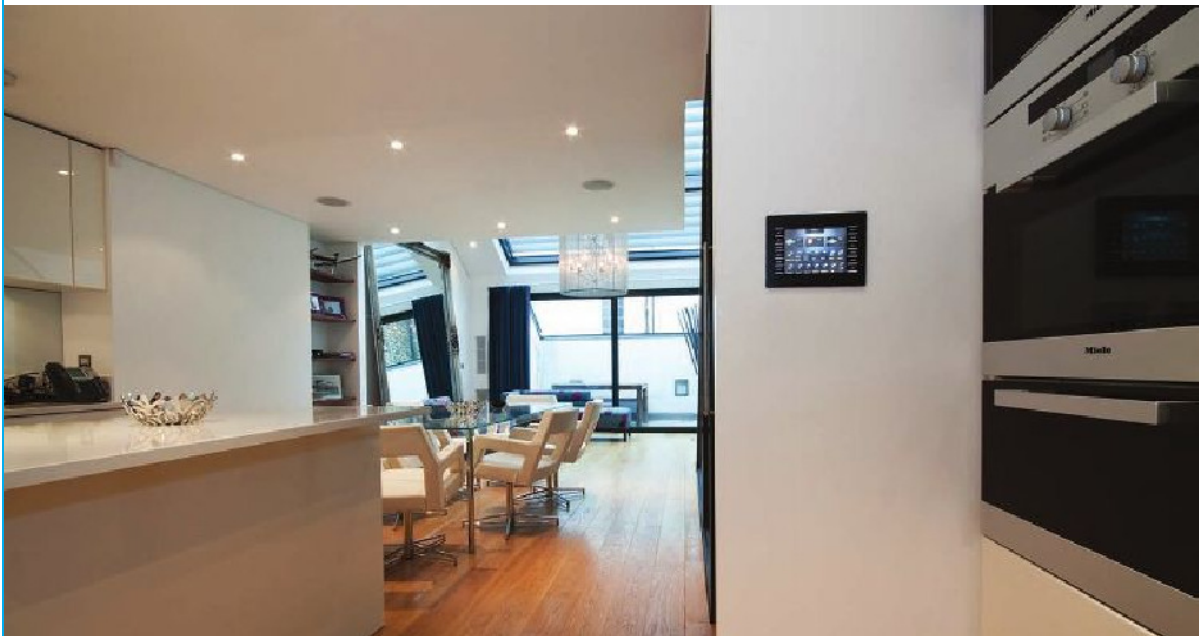

### WINNER: CUSTOM CONTROLS FOR LONDON TOWNHOUSE

In a truly innovative project – as the first installation of Digital Media in the country - this project was ground-breaking in the true sense of the word. Collecting his award, Dave Chester of Custom Controls said: “We are extremely pleased to win this award, having won last year and been a finalist the year before that. Our clients love our systems but it is great to get some industry feedback too, especially from a company with the calibre of Crestron. We are just concentrating on a winning project for next year now!”

As inaugural installations go, this one is certainly pretty impressive. But, if you thought that Custom Controls were fazed about being responsible for the first DM installation the UK has ever seen, then you wouldn't know it! In addition to the technical challenges, the system installation was also completed in a tight, one month timescale. A beautiful installation, done beautifully!

■ The winner of the Most Innovative Control Solution, Custom Controls for London Townhouse, was the very first Digital Media install in the UK

■ Custom Controls completed its award winning project in just one month
