Kaleidescape Conductor

Enjoy your Kaleidescape music on the go

- **Synchronizes Kaleidescape music to iTunes**

- **Creates MP3 versions for loading on an iPod**

- **Allows music to be synchronized by album, Mix Album, artist and genre**

- **Converts Mix Albums to iTunes playlists**

- **Copies cover art and metadata to iTunes**

- **Automatically updates iTunes with changes on the Kaleidescape System**

Kaleidescape Conductor allows users to choose a collection of any or all their Kaleidescape-stored music to enjoy on their PC in the iTunes® music application. Or they can take their music on the go in their iPod® or other portable digital music player.

Music synchronized from a Kaleidescape library to iTunes is encoded in MP3 format at a selectable bit rate. Kaleidescape Conductor also copies cover art and metadata from the Kaleidescape System and adds it to iTunes along with the music content.

Kaleidescape user-defined collections offer tremendous flexibility and simplicity in choosing music to synchronize. A user-defined collection may contain an album, Mix Album, artist, genre or any combination thereof. Artists and genres in a collection update automatically when matching content is imported or deleted from the System.

For example, when imported, a jazz album will automatically be added to any user-defined collection that includes the jazz genre. These changes are automatically reflected in the synchronized iTunes copies. Synchronized Mix Albums are duplicated as playlists in iTunes, and changes made to Mix Albums are reflected in the synchronized iTunes playlists as well.

Kaleidescape Conductor allows users to take Kaleidescape music on the go without disturbing the pristine uncompressed CDs stored and protected on the Kaleidescape System.

Kaleidescape Conductor is compatible with computers running Windows XP SP2 and Windows Vista.
