

LINN

THEY CAN  
FIT IN THE  
SMALLEST SPACES  
AND FILL  
THE LARGEST  
HOMES.

**“Involving, luxury entertainment systems designed and engineered specially for you and your home.”**

**Ivor Tiefenbrun MBE**

## **HEAR WHAT YOU WANT ANYWHERE IN YOUR HOME.**

We live with sound waves every day, without always appreciating the difference they make to our lives. A sad tune can fill your eyes with tears, while a happy one will fill your home with joy.

To experience this to the full you need access to, and control over, all your entertainment throughout your home. That's exactly what a multi-room system from Linn gives you.

It allows you the freedom to listen to your favourite recordings, uninterrupted, as you move from one part of your house to another, and to enjoy home-theatre with the added dimension of a powerful, pitch-accurate soundtrack. In short, you can get more pleasure from music and movies than ever before. Prepare yourself.

In ocean liners and city apartments, in royal residences and family homes, Linn systems are appreciated around the world.

Keep up with current events and issues as you move from room to room.

## WE'VE NEVER COMPROMISED OUR STANDARDS IN 30 YEARS.

In 1972, the original Linn SONDEK LP12\* turntable started a revolution. It demonstrated that to reproduce the thrill and emotion of a live performance, you had to extract the full signal from the recording. The result sent shivers down the spine of music lovers everywhere.

Because music matters, Linn has applied that same passion for retrieving and protecting the original source signal to a wide and growing range of products. Each is precision-engineered by highly skilled people who share our commitment to pitch-accurate audio reproduction.

The following pages will introduce you to some of those products. Just as in 1972, however, the difference must be heard to be believed.

All key processes, from  
machining precision  
components to manufacturing  
advanced and complex  
electronic circuits,  
are controlled by Linn people.

Our passion for music is  
expressed by the KOMRI\*  
professional full-range  
loudspeaker that sets new  
standards in pitch-accurate  
playback.

**EVERY COMPONENT IS  
CLYDE-BUILT IN SCOTLAND.**

Every Linn component is made to the very highest standard at our factory in Scotland; we believe in monitoring and protecting the musical signal at every stage from the original performance to the sound you hear.

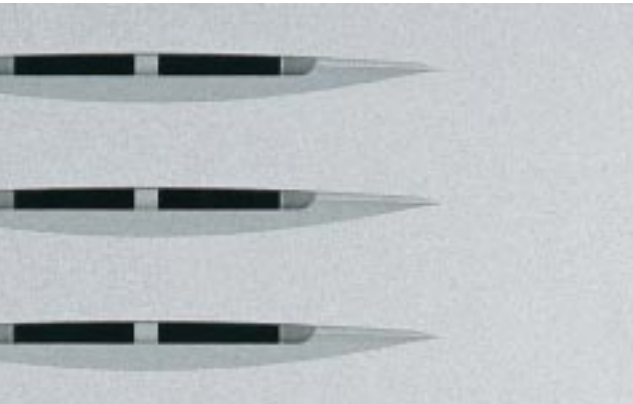

Source components, such as turntables and CD players, are designed to extract every nuance and detail of the music from your recording.

Control components such as pre-amplifiers are built to adjust and control signal purity through the system.

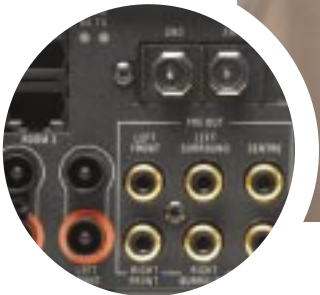

Playback components such as power amplifiers deliver efficient, noise-free power to discreet, stylish loudspeakers.

The infrastructure, cabling and connectors that carry the signal are specifically designed to protect it, no matter how far it travels.

All Linn products are designed to deliver many years of enjoyment and will be compatible with any new Linn component you purchase.

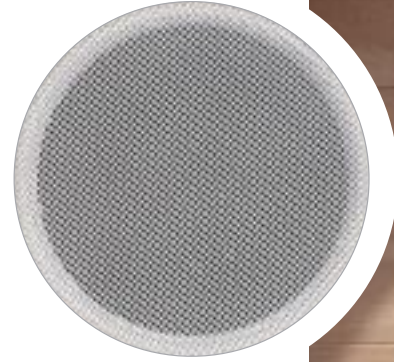

Open interfaces  
make a Linn system  
simple to upgrade  
or improve.

As a source component, the  
SONDEK CD12\* CD player  
represents the very best in  
precision digital engineering  
and CD playback performance.

Powerful but discreet Linn  
loudspeakers will fill your home  
with your favourite music...

## QUALITY SOUND FROM LINN WILL CHANGE A HOUSE INTO A HOME.

Music can relax, lift your spirits or simply provide an escape from modern day pressures. Entertainment is a basic human need. All these benefits can be enjoyed to the full in every room of your home with Linn multi-room systems that completely transform the way you live.

They are installed skilfully and discreetly, so from the moment you step through the front door you have complete access and control. Whether filling your whole home with the same music, or allowing individuals to access their own choice of music in different spaces, it's amazing how a Linn multi-room system can totally transform the way you feel at home.

...and integrate discreetly  
into any environment.

## MANY SOURCES, ONE STANDARD.

A modern home will have many sources of entertainment and information. The KNEKT\* system from Linn lets you use and integrate them seamlessly into one simple-to-control system. CD player, radio tuner, home-theatre, satellite TV – in fact up to 16 different sources – can be accessed and enjoyed by the entire family simultaneously.

From any point in the house you have direct access and control of all those sources via a wall-mounted RCU (Room Control Unit), or from a hand held remote control.

Imagine every corner of your home filled with the highest quality sound or home-theatre, and all this from a reliable system designed specifically to suit your unique requirements and installed discreetly to the very highest standards.

With the Linn RCU  
(Room Control Unit),  
the entire system is under  
your immediate control.

The KIVOR\* music library allows secure storage and playback of up to 1380 hours of high quality, uncompressed music. When used with a KNEKT\* system, 16 sources of music can be distributed to up to 128 rooms.

With a KIVOR\* music library, you can use the PC interface or intelligent touch screen devices to control and catalogue your music the way you want to hear it.

## CHOOSE YOUR MUSIC IN AN INSTANT.

In the digital age, there is no longer any need to search through racks or drawers full of CDs looking for the disc you want to hear, perhaps only to find the case empty! The KIVOR\* unit allows you to securely store all your CDs on hard disc. Up to 1380 hours is already possible and more capacity is on the way. This means music all day, every day for months without ever having to repeat anything.

The data is not compressed, so audio quality is as good as the original. People throughout a home can access up to 16 different programmes at the same time, making the KIVOR\* unit the ultimate luxury for a multi-room installation.

## INSTALLED WITH AN EYE AND AN EAR, FOR DETAIL.

Correct design, installation and set-up are vital to get the most from a multi-room system. A Linn Custom Installer is fully trained to take account of all your needs, both now and in the future.

Across all performance levels available with multi-room systems, the common themes of open architecture, high performance and discreet, professional installation are most important. A Linn Custom Installer will carry out the entire project using the highest quality components and will anticipate future developments, as the KNEKT\* system has scope to grow. In the end, however, the most crucial equipment our expert installers possess are their ears. After all, only if it sounds better, is it better.

### Bespoke Custom Solutions

The KNEKT\* system is the most versatile high performance multi-room system available. Even if our extensive product range does not fit your special needs, you can simply ask and we can draw on our innovative precision engineering and manufacturing expertise to create a unique, bespoke solution designed only for you.

Our stylish, understated  
components can be installed  
to be as visible, or as  
hidden, as you would like.

FIVE LEVELS  
OF MULTI-ROOM  
PERFORMANCE.

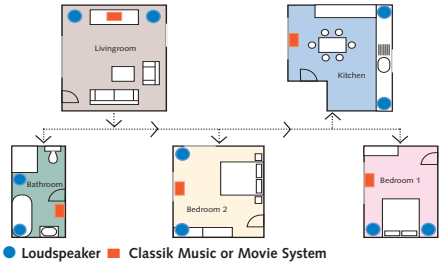

The INTERSEKT\* matrix-switching unit enables a Linn KNEKT\* system to distribute up to 16 sources to 128 zones with Linn's famed pitch accurate sound quality throughout.

The individual design of your Linn entertainment system will depend entirely upon your needs and be tailored specifically to suit your home. Regardless of what level of performance you choose, the quality of cabling and installation will be of the same high standard throughout. Our open architecture allows for future upgrades when enhanced performance is desired.

LEVEL 1 - BRONZE

Bronze

Bronze level solutions provide a cost-effective entry into the world of pitch accurate multi-room audio. The all-in-one CLASSIK Music System, which includes CD player, AM/FM tuner and amplifier, is easily connected to other CLASSIK units, enabling the distribution of high quality music throughout the home. It is possible to connect up to four additional CLASSIK products to the unit in your 'main' room. Each secondary unit receives and controls what is playing in the 'main' room CLASSIK unit in addition to control of its own sources.

The CLASSIK Movie System, an all-in-one DVD/CD player, AM/FM tuner and 5.1 channel amplifier, also has the facility to distribute audio to up to four additional CLASSIK Music or Movie Systems.

For greater flexibility and discreet installation, your installer can add a KNEKT\* RCU (Room Control Unit), a wall mounted keypad, for complete control of 'main' and local room CLASSIK systems. Apart from loudspeakers, the RCU is the only part of the system that ever needs to be visible.

LEVEL 2 - SILVER

For more flexible multi-room applications, our Silver level of performance uses the KNEKT\* Driver/Receiver components to allow you to enjoy 'main' room sources throughout the home. The Silver level provides the added flexibility of being able to listen to a different 'main' room source in up to 4 secondary rooms. While having a choice from the 'main' room you also have access to local audio from sources such as VCR, CD etc.

An RCU is required in each zone to control both main and local sources and also take advantage of the KNEKT\* system's unique two-way communication path.

The RCU can transmit, receive and display data throughout the system and show a variety of information such as CD track, name, artist and tuner programme information.

The RCU can also be configured to control a wide range of non-Linn components such as multi-disc CD players and satellite receivers.

Silver

Gold

KIVOR\* Archive and Retrieval System

INTERSEKT\* Matrix Switching Unit

16 audio sources distributed to up to 128 rooms

LEVEL 3 - GOLD

To address more complex and demanding multi-room applications, our Gold level of performance uses the KNEKT\* INTERSEKT\* System. The INTERSEKT\* unit offers freedom to select any audio source in any part of your home. It is capable of distributing 16 different programmes to 128 rooms with the pitch accurate sound quality that Linn customers demand. Larger installations can have a "virtual" 'main' room system installed discreetly in a cupboard, basement or attic. The only component that needs to be visible is an RCU and, of course, loudspeakers.

LEVEL 4 - PLATINUM

Our Platinum performance level allows for integration of advanced control devices such as intelligent touch screen interfaces or even a PC connection into the KNEKT\* system with no loss of control. It can also provide control over other automated home systems such as curtains, lighting, security and garage doors. By integrating these control devices, it is possible to have a touch screen in your main room and handsets and Linn wall-mounted keypads in other rooms.

\*Trademark of Linn Products Limited registered in at least the UK and/or European Union.

LEVEL 5 - DIAMOND

Our highest level of custom solution is limited only by your imagination. We can combine our specialist experience gained in the Superyacht industry with our innovative precision engineering to offer you a truly bespoke solution – a system that offers cutting edge performance coupled with a design that is unique to you and your home.
