

Crestron C2N-DB Series Wall-Mounted Decorator Keypads

Crestron C2N-DB Series keypads are in-wall decorator style interfaces compatible with standard electrical gang boxes and Decora® trim plates. Available in 6, 8, or 12-button configurations, C2N-DB keypads can be mounted singly or multi-ganged to meet any custom application, from AV source selection to audio/video conferencing functions. C2N-DB keypads feature removable, engravable buttons that allow easy replacement and custom labeling. Keypads are available in black, white and almond to match any décor.

Custom Programming — C2N-DB keypads are designed for seamless integration with Crestron control systems, network control modules, and AV equipment to create cost-effective solutions for any automation need. Using Crestron's powerful software tools, including SIMPL™ Windows and Crestron Application Builder™, programmers can provide users with easy one-touch control of audio, video, security, HVAC systems, and more. With programmable LED feedback that's clearly visible from any angle, users always know the status of the equipment they're controlling. Programmers can configure C2N-DB keypads to control single lights, lighting scenes, even non-lighting environmental devices such as drapes and screens or AV sources. Unlike other keypads that only provide

on/off control, each C2N-DB keypad button can perform a variety of functions so cluttered banks of switches and dimmers can be replaced with a single keypad, providing a clean, elegant look. C2N-DB keypads can be combined with QuickMedia™ Wall Plates in multi-gang configurations, delivering maximum functionality and aesthetics to Crestron MediaManager™ solutions.

- > *Compatible with standard electrical gang boxes and Decora® trim plates*
- > *Available in 6, 8, and 12-button configurations*
- > *Programmable feedback LEDs*
